Length of Training: 1 year

ACGME Approved: No (in the process of becoming ACGME approved)

Description of Fellowship: The Cardiac Anesthesia Section offers a one-year fellowship in cardiac anesthesia. The fellowship is designed to provide clinical subspecialty training and clinical research opportunities. The clinical fellowship is flexible enough to meet the needs of those interested in either an academic career or clinical practice.

The general emphasis of the year will be clinical adult cardiac anesthesia and much of the fellow's time will be spent in the operating room. Major vascular surgery, particularly that involving ascending and descending thoracic aortic aneurysms, will also be part of the fellowship. Other subspecialty rotations may be arranged. During the first three months of the year the fellow will function as a resident in the heart room to become familiar with our techniques and personnel. The fellow will be expected to participate in clinical research undertaken by the cardiovascular anesthesia group. It is expected that the fellow will complete a project suitable for publication during the year.

All types of adult and pediatric cardiac surgery are performed at Stanford University Hospital. The Department of Cardiovascular Surgery at Stanford consists of six attending surgeons and is noted for its contributions to cardiac transplantation, combined heart-lung transplantation and the utilization of left ventricular assist devices as bridges to transplantation.
