Length of Training: 1 year

ACGME Approved: Yes

Description of Fellowship: Stanford University Medical Center offers one and two year fellowships in Critical Care Medicine (CCM). This ACGME-approved fellowship in both

medicine and anesthesia combines research and clinical experience. The fellowship year begins with the fellow serving one month as a CCM resident. During that time, the fellow takes calls and admits patients as a resident, writing all patient care orders under the supervision of the faculty. During the next several months the fellow supervises patient care provided by residents and students. Progressive independence during the fellowship gives the fellow more opportunities to direct patient care and teaching. Near the end of the year, the fellow serves a period as a junior attending on the service and is responsible for all patient care and teaching activities.

During the remainder of the year (about 3 months) each fellow is expected to participate in an area of research related to critical care. An 18 month program is available which would begin in the second half of the CA 3 year and allow for 10 - 11 months of research time. The Department offers facilities for physiological and pharmacological research. The varied interests of the faculty afford the fellow exposure to a wide variety of investigative skills. Current faculty interests include mechanisms of acute lung injury in sepsis, the use of vasoactive drugs in shock, pulmonary hypertension and development of improved cardiorespiratory monitoring techniques.
